Comments for cfo rulemaking

Any AFO that has a discharge into waters of the state should be required to enter the cfo/cafo program.

Public hearing are important and should be continued in the rules.

Wording mentions professional engineer. Engineers should be required to be licensed in the state of Indiana

Person proposing ownership by transfer of facilities should be required to meet the good character rules.

Setbacks are no sufficient from property lines and public roads. Consideration should be made for neighbors.

Ask that operators be required to submit reports on manure application to IDEM twice a year. Jan they would identify their land application sites and in Dec they would report where, when, and how much manure they applied. This should be posted to the VFC

Need stronger rules on drag lines that include the site and length of time allowed to be under roads and in drainage ditches, creeks and culverts.

I agree with the new proposals to not allow application to frozen or snow covered ground.

I agree with proposal that manure cannot be applied on saturated ground and on acreage with phosphorus level over 200ppm.
